

Exede™ High Speed Satellite Internet Service

Exede™ High Speed Satellite Internet is great for those who have no other alternative to internet services; such as rural or farm locations. No phone line is required, we simply install a satellite dish and a modem and you are connected.

Satellite Internet is metered- this means that you pay for a plan of what you think you will use in a calendar period, and as you get close to using up your data allowance, the internet will slow down. However, with Exede™ the customer is now in control! Exede™ allows customers to monitor their usage anytime, and allows the customer to “buy more now” to help you add more data to your plan at anytime. Exede™ also has set a exact reset date instead of a rolling calendar in previous plans. You know that your reset date will be the same every month, to help you better manage your usage and plans.

For first time users- based on what information you tell us you use the internet for, we recommend you start at a lower plan so you don't pay for something that you are not using. We can always change your plan to fit your needs.

Speeds (Plans may vary by location):

Up to 12Mbps Download and up to 3Mbps Upload

Speeds are not guaranteed- and actual speeds will vary.
